

3.9 Influence of Magnetic Field Strength on Loudspeaker Pressure Response	80
3.10 Magnet Systems	81
3.11 Film Transducers	87
3.12 BMR; The Balanced Mode Radiator	104
References	114
Bibliography	114
4 Low-frequency System Analysis: Room Environments and 2π Theory	117
4.1 General Considerations	117
4.2 LF System Analysis	137
4.3 Closed-box System	146
4.4 Reflex or Vented Enclosures	155
4.5 Band-pass Enclosure Designs and LF Equalization	169
4.6 Longevity, Reliability, Tolerances, Climate	182
4.7 Transmission-line Enclosures	185
4.8 Sub-woofers and Extended Low Frequencies	190
4.9 Horn Loading	194
4.10 Line Sources	200
4.11 The Moving-coil Spaced Dipole	203
4.12 Bi-polar Speakers	203
References	204
Bibliography	206
5 Moving-coil Direct-radiator Drivers	209
5.1 Moving-coil Motor System	209
5.2 Low Frequency, Bass Units	212
5.3 LF/MF Units	233
5.4 Mid-frequency Units	235
5.5 High-frequency Units	243
5.6 Full-range Units	249
5.7 Dynamics and Engineering	256
References	260
Bibliography	261
6 Systems and Crossovers	263
6.1 Passive Loudspeaker System Design	265
6.2 The Crossover Network	271
6.3 General Design Considerations, Voicing and Balancing	311
6.4 The Amplifier-loudspeaker Interface	321
6.5 Active Loudspeakers: Electronic Filter Crossovers	327
6.6 Current Drive	343
6.7 Digital Loudspeakers	345
References	357
Bibliography	358
7 The Enclosure	361
7.1 Enclosure Materials	362
7.2 Enclosure Resonances	364
